Maryland Benefits from Airports in 2023

- Maryland's economic well-being is closely linked to its vibrant airport system and robust aviation industry. The State's aviation infrastructure enables the broader community to benefit from an increasingly global marketplace.
- Aviation in Maryland both sustains and drives economic growth and development. Protecting and investing in airports will support the aviation industry and maintain its positive impact on local, regional, and state economies. With ongoing support, Maryland's dynamic aviation system will continue to deliver significant economic returns in the years to come.
- Maryland has 34 public-use airports; however, this study includes 33 of them, as it excludes Baltimore/Washington International Thurgood Marshall Airport.*
- Maryland's public-use airports account for over 10,000 jobs, including more than 5,000 direct jobs generated by airport and visitor activity.
- Of the over 10,000 total jobs, more than 2,500 included induced jobs that supported local economic sectors through purchases of goods and services by directly employed workers.
- Out of the over 10,000 total jobs, nearly 2,400 were indirect jobs supported by local purchases.
- Nearly $753 million dollars in personal wages and salary income was created in the State of Maryland by the activity at these airports.
- The industry contributes approximately $1.425 billion in total economic activity, which includes over $1.107 billion in business revenue from airport tenants, support services, and visitor services, as well as almost $312 million in local purchases.

Maryland Economic Impact of Airports

MARYLAND DEPARTMENT OF TRANSPORTATION
MARYLAND AVIATION ADMINISTRATION

The Maryland Aviation Administration commissioned this study for the calendar year 2023, to measure the economic impact of airport activity generated by 33 of the State's public-use general aviation and scheduled commercial service airports (study excludes Baltimore/Washington International Thurgood Marshall Airport). The approved methodology for this study has successfully been implemented throughout the U.S. to quantify the value of airports and airport systems. The economic contribution of each airport in the Maryland airport system was measured in terms of jobs, personal income, state and local taxes, and revenue generated directly by airport activity, using a base year of 2023 for the analysis.

Determining the Impact

Maryland's airports contribute to both the state and local economies by generating business revenues from various aviation-related activities, including aircraft operations and fuel sales, cargo and package freight services, goods and services for pilots and passengers, and the rents, leases, and services provided by on-airport businesses. In turn, these airport-related businesses hire employees and the wages paid to these employees generate additional spending within the economy. On-airport businesses also purchase goods and contract services from local and regional vendors. State and local governments benefit from an expanded tax base resulting from increased employment and the flow of goods and services. The graphic below shows the economic impacts created by the airport and the statewide system, which are measured in terms of BUSINESS REVENUE, JOBS, PERSONAL INCOME, and TAXES.

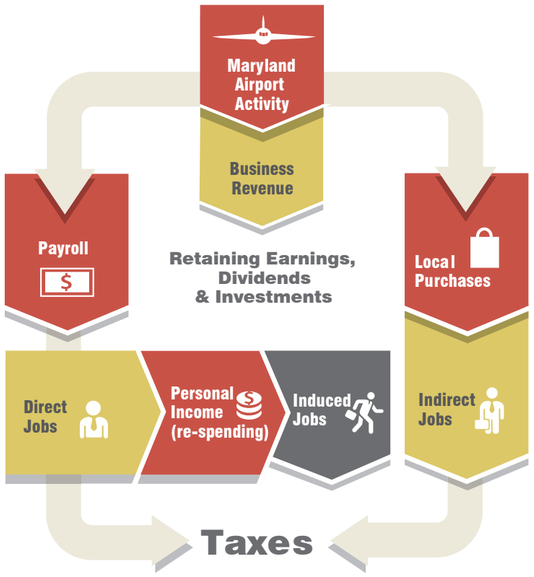
BUSINESS REVENUE: Airport-related business revenue is defined as revenue generated by businesses providing goods and services to commercial airlines, general aviation aircraft, military aircraft, and flight schools. These businesses providing the service and the individuals employed by these firms also pay state, local, and federal taxes.

JOBS: Airport-related employment consists of three levels of job impacts - direct, induced, and indirect employee impact. DIRECT JOBS are jobs directly generated by airport activity, which would vanish if activity at the airports were to cease. INDUCED JOBS are created throughout the regional economy because individuals directly employed due to airport activity, spend their wages locally on goods and services such as food and housing. INDIRECT JOBS are generated due to the purchase of goods and services by firms dependent upon airport activity.

PERSONAL INCOME: Personal Income consists of wages and salaries received by those directly employed by airport activity and includes a re-spending impact which measures the personal consumption activity in the region of those directly employed as the result of airport activity. Indirect personal income measures the wages and salaries received by those indirectly employed.

TAXES: State and local taxes are paid by businesses and individuals involved in providing goods and services in support of airport activity.

Flow of Economic Impact

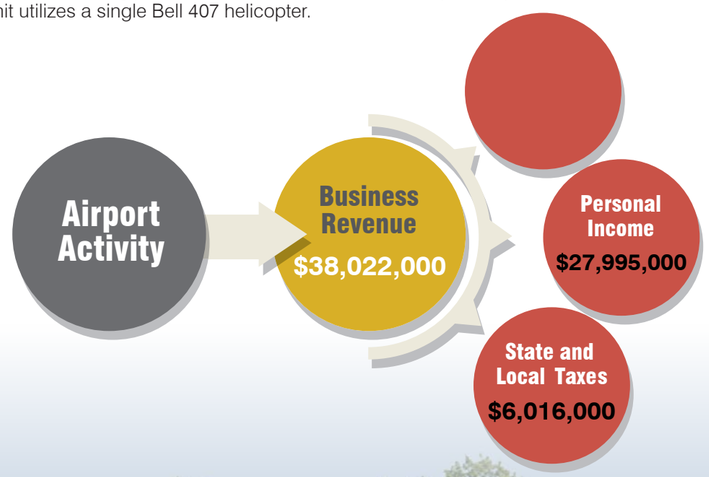


Tipton Airport

Tipton Airport (FME), a former U.S. Army airfield, is now a public airport that is owned and operated by the Anne Arundel County Tipton Airport Authority. The Airport is located one mile southwest of Fort George G. Meade in Odenton, and is equidistant to Baltimore, Washington D.C., and Annapolis.

The airport maintains a single asphalt runway that is 3,000-feet-long by 75-feet-wide with a full parallel taxiway and non-precision approach. The airport is included in the FAA's National Plan of Integrated Airport Systems (NPIAS), making it eligible to receive federal funds. As a reliever airport, Tipton diverts general aviation activity from larger commercial service airports to minimize delay and congestion. The airport is one of six FAA-designated reliever airports in Maryland.

The Authority serves as the fixed based operator (FBO) offering self-service 100LL and Jet-A fuel. Aircraft parking and storage is available on paved tie downs, in T-hangars, and in community hangars. The airport supports all types of general aviation activity including flight instruction, aircraft rental and sales, maintenance and avionics, and charter flights. There are 113 based aircraft at the airport consisting of single- and multi-engine aircraft, and helicopters.

The airport serves the business, recreational, and flight training needs of the community. 1World Aero and Fort Meade Flight Activity Inc. offer aircraft flight training services. Solid Ground Aviation, is a new tenant providing simulator-based flight training. Chesapeake Sport Pilot operates an aircraft maintenance facility on the airfield, while G-Force Avionics LLC offers both aircraft and avionics maintenance. MedStar Transport is based at the airport, providing air ambulance service, and operating a maintenance base for its fleet. Sky Helicopter and Helicopters Inc. provide aerial news gathering for numerous television stations within the region.


The Anne Arundel County Police Aviation Unit is based at Tipton. It provides aerial tactical support of ground units, aerial observation and pursuit, missing persons, search and rescue, tactical patrol operations, and assists during extraordinary police incidents. The Unit utilizes a single Bell 407 helicopter.
